

1. Explain How to Access a Report in Power BI Service from PowerPoint.

Ans:

Power BI provides integration with Microsoft PowerPoint, which allows users to add Power BI reports and dashboards to a PowerPoint presentation. This makes it possible to present interactive Power BI data directly from PowerPoint instead of using static screenshots.

Steps to Access a Power BI Report from PowerPoint

1. **Open PowerPoint**
Open Microsoft PowerPoint and create a new presentation or open an existing presentation.
2. **Select the Insert Tab**
From the top menu in PowerPoint, click on the Insert tab.
3. **Select Power BI**
In the Insert options, select Power BI. This opens the Power BI integration window.
4. **Sign in to Power BI**
Sign in using the Microsoft account that has access to the required Power BI report.
5. **Select the Report**
Choose the required Power BI report or report page from the available workspaces and reports.
6. **Insert the Report**
Select the required report page and click Insert. The Power BI report will appear on the PowerPoint slide.
7. **Interact with the Report**
During the presentation, users can interact with the embedded report using filters, slicers, charts, and other interactive elements, provided they have the required permissions.
8. **Present the Report**
The Power BI report can then be displayed as part of the PowerPoint presentation, allowing the presenter to explain the data using live interactive visuals.
